- **Developed applications**

- ***Virtual library***: the application was created for the people who has medium/large sized personal library, and they want to keep track of the books already purchased. The application was originally created in C#, and later developed in JavaFX.
- ***The log registry of receipts and payments***: the application deals with the simple bookkeeping of a certified self-employed worker. The application stores in a database (SQLite) the receipts and the payments documents of the certified self-employed worker. It was developed in JavaFX.
- ***The Web Application – “The Online Guide of Bucharest”***: photographing the city, creating the logo, creating the layout of the site (Photoshop), HTML, CSS, PHP, JavaScript, Bootstrap, MySQL.
- ***Water Meter Management***: the application deals with keeping the records of the water meter indexes. It stores in a database (SQLite) the indexes read monthly, depending on the type of water (hot/cold). The user can view the list of indexes introduced, the consumption from one month to the next, but also the annual consumption, viewed in a graph. The application was developed in JavaFX.
- ***Web Portfolio***: the web application was made with HTML 5, SASS, JavaScript, Bootstrap 4, jQuery, JSON, Photoshop, Chrome DevTools.

The applications can be viewed in more detail by visiting my personal web portfolio at: <https://cristinamogos.github.io>
